

Important information about the compatibility of Mammut and Snowpulse Avalanche Airbag System with the ABS Carbon Cylinder

On 14th November 2011, Mammut was informed by TÜV South Germany that ABS has made a change to their Carbon Cylinder. This alteration is to the thickness and hence the strength of the copper covering plate. Previously, ABS had specified 0.3mm but now this will be reduced to 0.2mm

This change means that the ABS cylinder is no longer compatible with the Mammut and Snowpulse Avalanche Airbag Systems. There is a risk to safety if the ABS Carbon Cylinder is used with the Mammut and Snowpulse Avalanche Airbag Systems.

Carbon Cylinders with an filling date before 01.04.2011 can still be used with the Mammut and Snowpulse Avalanche Airbag Systems. The filling date is indicated on every cylinder on a round sticker together with the weight.

To avoid uncertainty and confusion, from now on it's only allowed to sell Mammut and Snowpulse cylinders for use with our Avalanche Airbag Systems.

Please feel free to contact us if you have further questions.

Yours sincerely
